Notebook, PN-10-00-00.2

This undated pocket notebook was used by Edison, probably during 1910 and 1911 and possibly as late as 1912. Several entries may have been made in August 1911, while Edison traveled in Europe with members of his family. The book contains notes and drawings regarding experimental work and other tasks to be performed at the laboratory. Many of the experiments relate to improvements in storage batteries, phonographs, and phonograph records. Other entries pertain to Edison's kinetophone, concrete cabinets for phonographs, educational films, and stereoscopic effects and color photography for motion pictures. Among the employees mentioned in connection with individual experiments are Ralph Arbogast, Jonas W. Aylsworth, Pursell Eggleston, Ignacy Goldstein, Walter E. Holland, Miller Reese Hutchison, and Alexander N. Pierman. The battery-related entries include notes on the composition and performance of cells and a list of sixty-nine items, entitled "uses for battery," describing applications in electric vehicles, tricycles, and submarines; in automobile and home lighting; in sailing vessels, with windmill power; and in other devices such as miners' lamps, burglar alarms, and dentist drills. Also included are entries pertaining to the manufacture of nickel hydroxide and to clutch devices for trucks. In addition, there are plans for making phonograph records out of condensite, shellac, hard rubber, and celluloid; proposals for recording popular songs and the sounds of naval gunnery; and ideas about marketing phonograph records. Among the individuals mentioned in relation to Edison's business affairs are Henry H. Harjes in Paris; Etienne de Fodor in Budapest; and his European representatives, Paul H. Cromelin, Maurice E. Fox, Thomas Graf, and John F. Monnot. There are also entries pertaining to personal and family matters, including references to the estate of John Kruesi and a draft telegram, probably to Edison's daughter, Marion Edison Oeser, regarding a rendezvous with his son-in-law, Oscar Oeser, in Switzerland. The front flyleaf bears a list of famous Frenchmen and a list of French cities. The pages are unnumbered. Approximately 140 pages have been used.

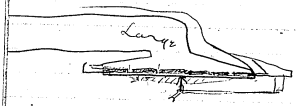
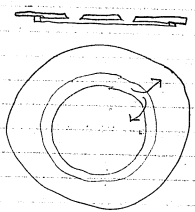
Mrs Kreuzi Lausanne is short of money & needs to have the settlement of the Estate Carried out as soon as possible. When get back write urgent to hurry up —

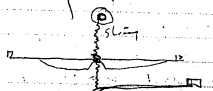


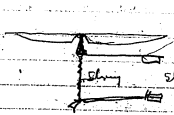
Think that air space should only be .003. — the regular wave would go too much sideway to the wave but by using a plate with holes so wave only goes into the .003 space about 1/8 inch this resonance would be small (so) the fall of pressure little & great compression would be given dia — also the amplitude would be less for large waves running to high compression but not for weak waves. Possibly to have on both sides

or



For recording paper paper dia with cork





Stereoscopic effect

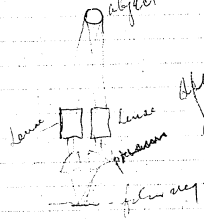


photo to show overlapping and both sides will long

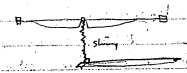
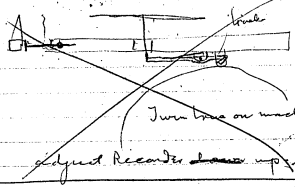
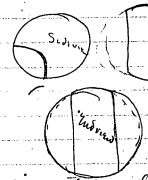
Precip $Ni(OH)_2$ + dry H_2O out by heating in fumes acid etc.

Make flake 1/4 Co 3/4 Ni —







Cam track deep + slide and bull offset

Looks as if proper duplicate to work on Pathes is 10/1000 wide 8/1000 Cutter double speed + a special way to cut very deep + highly sensitive Records without or little fog. Lateral off

despair — made our chemistry retirement Repeat very soft long string + light lamp.

Try wafers dip wood with
Carb Stronties etc for deep
Cut – possibly acid Stearate
Stronties & deep by CO_2

also make layer like Mica
Wax – one kind of wax on ~
Soloent dip this then dry
then another wax on another
Soloent that the 1st wax
wont dis-slow ~
These layers should be only
1/10 of 1/1000, hence no
Chipping possible
Even with very deep
Tracking

Ring up a strength cylinder
& test cylinder self-Rinse
Simply for necessary depth
of tracking with an 8/100
Rings

Should I get Piano lay very sensitive
Recorder & deep tracking advantage
should not be taken of it to
get Corrupted Loudness but
lower made minus leverage
so it will be no louder
than Piano on disk now –

~~Try Stearate Soda powder~~
~~Stearate & Carb Soda or K~~
~~Thus~~

Use Stearate Strontia &
Carb K or Na – thus
make Carb Sr & Stearate
K or Na & have some

Redver Fe w very weak
sol by Zn —
also in Electric Rolled
use big magnet
to draw Fe down into
the Hydrochloro —

Possibly polished Electrode
be surrounded with a
bag then which the
weak sol slowly
percolates, will be best
Also with the Zinc

Reduce Mercury Fe Sol
on plates semi dry
Mercury

Fe Sol ably should have another salt to combine & give tols hydrogen possibly a cyanide would work —

With Bismuth. It looks as if what was wanted is to make Bi OH more soluble in KOH. — Lott,

Perhaps the sulfate like Strontium etc ~~which gives Fe(OH)3 ppt~~ will work fine with 15 or 20% Cobalt. Also Bismuth to give conductivity

Try Iron with 10, 20 & 30% Cobalt — both will reduce to metal ~~but~~ & even the chg & discharge curves = Co reduced 1st & acts as ~~conductor~~ or Fe & is oxidized last + acts as conductor

Beg sure try 4 & 6 for filaments

Try nickel Fe & mix of Cadmium + Cobalt 1/2 & 1/2 & vary

Use weak KOH 2nd. Use 25% KOH

Magnesium tube Magnesium flake Lined with Zinc Reduced by H, or Zn powder or use pockets, Try with Minimum KOH, so very little Zn can dissolve — for a boost battery — Even the pockets would be large enough to hold off.

Particle size reason part of Condensate of pitch ok in 100 & others no is because not thoroughly Condensed probably should be baked many hours — to stop shrinkage stressed issue 75% of Condensate powder already Condensed highly Trials work with Hard Rubber — fetta truck 2 lo

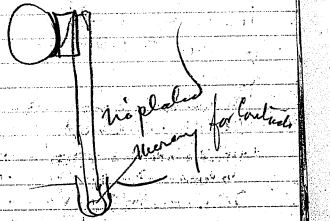
See if RA has reduced the crow mostly on Rolls — & How it worked

Try tubes with Borate Lime Strontia + Barytia with flake to see if gives Reversed like Sulphate + details Na & K Sulphate which are used also Carbonate Br Bart Ca —

Phono — Glass para cylinder Coat with Condensate Varnish bake & then press

Experiment with Rosin + Paper pulp for Center of disc to cheapen — also Asphalt, also Kauri — Manila copal Lac — etc,

Vitrolac Redfi



Use NaOH with Zn powder in tubes Dept and it dissolves Zn less — also try LiOH & NaOH

Truck wheel tires street paving wood block

In plating sponge 7a
Try graphite electrodes
no stirring —

Marble pressed chalk.
+ Condensate liquid, just damp
dried + pressed [illegible] quicklime
+ condensed + sweet bounds
Ammonia tile, various
Colors vanquished
Rosin mixed do & Tos

Broken Rosin
No contact

Try sulfide iron used to make H_2S, see if House will give H_2S & hydrate methane 7a

Bees Inspection sell good
Reorganize Sales dept Bat Co
& pushmore,

see if increasing the NaOH in dech dump — 1/8 tubes cell work, to increase capacity of loading — possibly 50% more can go — thus also adding flake

Try in 1/4 & 1/8 tubes
Continuous feed of NaOH flake + very rapid tamp

Try for 7a non nickel plated steel — also (good) Cobalt plated steel for 7a plating

Try the Copper wheel for Electrowelding Can seams.

Look up the idea of putting 2 lectures in 1 Can as exposed by Smith that Kennedy discovered -

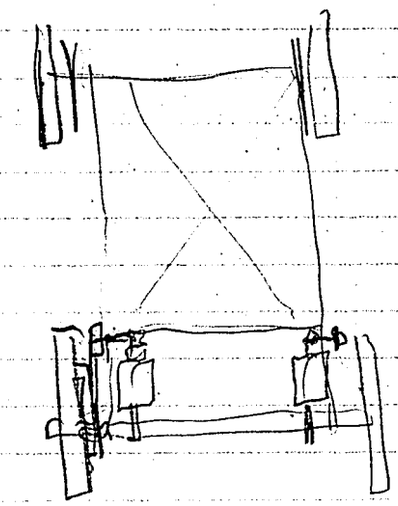
Somebody see the Gasoline Engine Fire Engine & see if they will build an Electric -

Act delivery lecture to School lecture & School Curriculum showing Bryan Kinetograph

Kinetophone - producing a Lecture on scientific subjects illustrated by Experiments + also

other lectures for the Lecture Bureaus

See if Orr's for dress I designed worked OK -



2 Motors 14 miles in Multiple - 6 miles

2 Motors in series

Worm gear drive

No differential -

1/2 the power - slipped to a change gear by mistake -

Regenerate timber, Reverse the Current in very weak KOH, Soak out & then use Peroxide or Chromic water or Reverse & chlor put in 2nd Soak out put in weak K.C.P. & make it anode to turn the Fe into Chloride Iron & Soak out.

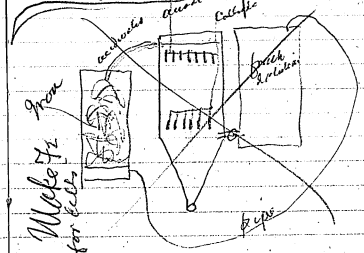
3rd Soak out get rid water by using alcohol then varnish in Oil containing Benzine chloride & Chloride Zinc Fe red wood & soak out,

Possibly a very high density necessary to get it out in flake & not too much on tooth =

Get some official Ne Sulfid Compound Sol in KOH made by Jwa =

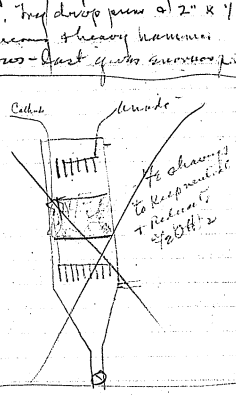
go up to Port Oram in auto see Kelly if he can make healthy slag for Concrete Fabricate found on California of there —

On a change gear of Byron Crucks a positive Clutch Can be used if the pin is connected & thrust in spring off long Headedly to stop shock & heavy stress



For comparing light loading $NiOH_2$
$NiOH_2$ drop pan a 2" x 1/4
after reducing & heavy hammer
2 blows - last quite a noticeable pressure

72 -

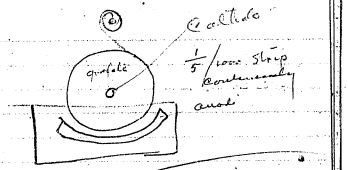


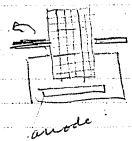
Perhaps a little 10% of Sulfate Strychnine precipitated with the MnO4 will do good also with 1 B 5 + 10% Cobalt,

Make 1/2 doz 1/16 tubes no flake put in one grid + test also
Some tubes with 10 + 25% Cobalt in MnO4

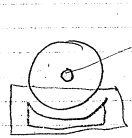
Possibly the nickel powders by Electrolysis from a weak $MnSO_4$ could be used instead flake,

~~When Hydrolysis gets time try make flakes with,~~





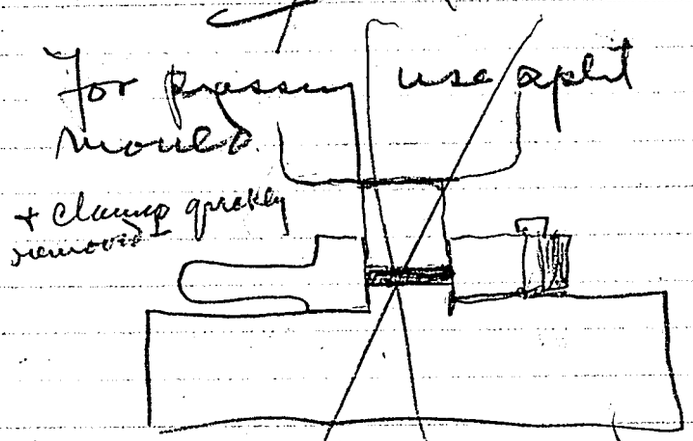
Then as metal wheel with insulated surface squeezes - the surface of the metal so with the metal it cracks which that it cracks & leaves it so by wiped off as flakes —



Try smooth wheel problem it comes to and do something to surface so next turn will not stick cut flakes capable to separate

I think no matter how low loading wt that drop press will give me the desired hence calls a quick drying will work cell.

For pressing use split mould



100 000 lbs sqr inch — thus fines all be required

Great by screw press in Potts room on the 6th floor R wt to find pressure

For Bi cell add 15 times the amount of every impurity in KOH + NaOH or that comes out of Fe to A4 Bi cells if this dont work measure solubility of Bi OH 15 times in KOH as there is only 1/15th the amount of 21% particles as in little test cell

Small cell charge Reg discharge in Vacuo + Vice versa & better chg + dis in Vac to see what part gas plays

~~Try putting $SrSO_4$ $BaSO_4$ into argon by soaking in $SrCl_2$ & precip by Na_2SO_4 look up all records where I used this or to see how I used it~~

Try on tubes Bromate $SrBr_2$ Arsenate, Borate Phosphate Tellurate Selenate Antimonate Molybdate Tantalate Vanadate Carbonate Chromate, Uranate Wolfrabate Tungstate -- Vanadate

In little Cell try Carbon disulphide to saturation in the H_2S also in bulb

Make CS_2 Compound of the Metals are made in KOH, & put in tubes alone CS_2 is analogous of CO_2

see if can clean outside of old tubes (@ Fe_2O_3 scale by scouring & high density burnt in KOH. also try strong LiOH Bal as reducing power of alkali - high force & off electromotive as in Cleaning tube strip in plating.

Also Soak tubes + dry put H_2S salt in + then reverse in LiOH also KOH, to amalgamate the flake + loosen scale then wash + without weak acid to remove if.

for pressing small cell.
think Screw press like those
for boxes at Bergman ok
or a Reg press with spring
set to right pressure, see
Rodgers —

Still Kunsky ~~if he can give~~
Bergman any information
has dearers also 3 and 4 dial
has results —

It may be unplated Zn
pocket be better than
plated as no deposit
potential as with nickel
